pneumatics
process control
sealing & shielding

ENGINEERING YOUR SUCCESS.

Introduction**Bladder Accumulators**

Liquids are practically incompressible and therefore cannot be used directly for storing energy. Hydro-pneumatic accumulators use the differing compressibility of liquid and gaseous media to enable energy to be stored in liquids under pressure.

Parker's hydro-pneumatic bladder accumulators provide a means of regulating the performance of a hydraulic system. Their simple, compact, design ensures dependable performance, maximum efficiency and long service life.

Technical Data

Standard volumes 1 – 50 litres
Operating pressure Up to 330 bar, with $p_2 < 4 \times p_1$
where p_1 = minimum working pressure
and p_2 = maximum working pressure

Precharge pressure
– energy storage 90% of minimum working pressure
– pulsation dampening 60% of maximum working pressure
– shock suppression 60% of maximum pump pressure

Std. temperature range Shell and ports: -40°C to +80°C
Bladder and seals: -15°C to +80°C
For use at other temperatures, please consult factory.

Fluid type Mineral oil (standard compounds)

Positioning From vertical (fluid port downwards) to horizontal. A minimum clearance of 200mm must be left above the gas valve for mounting the charging and gauging assembly – see page 5.

Why use a Bladder Accumulator?

- stores energy under pressure
- damps out pump pulsation and flow fluctuations
- improves system efficiency
- supplements pump delivery
- supplies power in emergency
- absorbs hydraulic shocks
- compensates for pressure changes in cases of thermal stress
- very contaminant tolerant
- suitable for use with low-lubricity fluids
- fast response times
- Safety – cannot disassemble under pressure

About Parker Hannifin

Parker Hannifin is the global leader in motion and control technologies, partnering with its customers to increase their productivity and profitability. The company employs more than 61,000 people in 48 countries around the world, providing customers with technical excellence and first class customer service.

Catalogues describing our standard products are available from your nearest Parker sales office – please see the rear cover of this catalogue for addresses. Where an application demands a non-standard approach, special products can be designed to order – our engineers will be pleased to advise.

Warning

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries, sales offices and authorized distributors provide product or system options for further investigation by users having technical expertise. Before you select or use any product or system it is important that you analyse all aspects of your application and review the information concerning the product or system in the current product catalogue. Due to the variety of operating conditions and applications for these products or systems, the user, through his own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance and safety requirements of the application are met.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

Offer of Sale

Please contact your local Parker representative for a detailed offer of sale.

Design Features and Benefits

1 Approvals

All BAE bladder accumulators meet the requirements of the European Pressure Directive (PED) 97/23/EC. Bladder accumulators are marked with the CE logo and supplied with a declaration of conformity. Hydraulic accumulators fulfil the safety requirements for all member states of the European Union, as well as Iceland, Liechtenstein, Norway and Switzerland. Certification to PED + ASME and PED + SELO is also available.

2 Shell

Parker's bladder accumulator shells are made from seamless chrome-molybdenum alloy steel with forged ends, for maximum strength. The standard shell is suitable for use at operating temperatures down to -40°C.

3 Bladder

The absence of dynamic sealing surfaces makes bladder accumulators tolerant of contamination and particularly suitable for low-lubricity fluids. Specially formulated for low permeability, Parker's bladders retain their high performance under a wide range of operating conditions including closed loop operation. Optional bladder compounds are available to suit all common fluids and operating temperatures.

4 Gas Valve

Accurate precharging of a bladder accumulator is the key to long and reliable service life. All Parker's bladder accumulators feature a robust gas valve, which is readily accessible for maintenance purposes. A charging and gauging assembly, described on page 5, allows precharging and monitoring to be carried out quickly and easily.

5 Fluids and Fluid Ports

Parker's bladder accumulators are supplied as standard for use with hydraulic mineral oil. They are also available for use with other media, such as bio-degradable hydraulic fluids, non-inflammable liquids, emulsions, etc. Fluid ports are made from high-strength alloy steel, for maximum durability. BSPP ports are fitted as standard. Other port styles are available, including stainless steel for sub-sea use.

Models, Capacities and Dimensions

Model	Volume Litres	Mass Kg	Max flow l/min ¹	A max	B max	C max	ØD	Ød	F	ØG	ØH	SW	J	K
BAE01	1.0	5	240	305	50	55	115	36	G ³ / ₄	35	51	32	G ³ / ₈	8
BAE02	2.4	10	450	535	67	55	115	36	G1 ¹ / ₄	53	75	50	G ³ / ₄	10
BAE04	3.7	13.5	450	417	67	55	170	36	G1 ¹ / ₄	53	75	50	G ³ / ₄	10
BAE06	6.0	17.8	450	540	67	55	170	36	G1 ¹ / ₄	53	75	50	G ³ / ₄	10
BAE10	9.2	29.5	900	559	93	51	223	36	G2	76	101	73	G1	13

BAE24	22.5	53	900	1009	93	51	223	36	G2	76	101	73	G1	13
BAE32	34.6	73	900	1394	93	51	223	36	G2	76	101	73	G1	13
BAE50	50	101	900	1920	93	65	223	55	G2	76	101	73	G1	13

Notes

¹ A minimum liquid volume (10% of V₀) must be maintained inside the accumulator. The maximum values listed only apply when installed vertically with the fluid port downwards.

All dimensions are subject to manufacturing tolerances. All dimensions are in millimetres unless otherwise stated.

Repair Kits

Spare Parts and Repair Kits

Gas Valve Assembly

Fluid Port Assembly – All Models

Parts List (All Models)

- 1* Protective cap
 - 2* O-ring – protective cap
 - 3* Gas valve
 - 4* Gas valve lock nut
 - 5* Bladder
 - 6 Shell
 - 7 Identification plate
 - 8 Hydraulic port assembly
 - 9* Anti-extrusion ring moulding
 - 10 Port spacer
 - 11* O-ring – hydraulic port
 - 12* O-ring back-up washer
 - 13 Fluid port lock nut
 - 14* Bleed plug
 - 15* Sealing washer for bleed plug
- * – included in repair kit

Repair Kits

Repair kits are available for all accumulator models. When ordering repair kits, please supply the complete model number from the identification plate and specify the fluid type and the temperature at which the accumulator is to be used. The repair kit comprises those parts marked with an asterisk in the parts list. For a full description of the compound abbreviations, see 'Bladder Compounds' on page 5.

Model	Compound

BAE32	BAE-BK32NBR				
BAE50	BAE-BK50NBR				

Bladder Compounds

Parker offers bladders moulded from a variety of compounds, to suit a wide range of fluids and operating temperatures. Unless ordered specifically, a Group 1 (nitrile) bladder will be supplied. The table lists the compounds in which bladders are available, their recommended operating temperature ranges,

and the types of fluids with which the different materials are generally compatible. Note that temperature ranges may vary depending on the fluid used in the hydraulic system. If in doubt, contact the factory with details of the application.

Group	Bladder Compound	Fluid Medium	Temperature Range
1	Nitrile (NBR)	General purpose, mineral oil-based fluids	-15°C to +80°C
		HFA and HFB fluids ¹	+5°C to + 55°C
		HFC fluids ¹	-15°C to +60°C
2	Low Temperature Nitrile (LT NBR)	Mineral oil-based fluids	-35°C to +75 °C
3	Butyl (IIR)	Most phosphate ester and some synthetic fluids	-15°C to +80°C
5	Fluorocarbon Elastomer (FPM)	High temperature and/or synthetic fluids	-20°C to +100°C ²
7	Ethylene Propylene Diene (EPDM)	Phosphate ester-based fluids and water	-40°C to +80°C ³
9	Epichlorohydrine (ECO)	General purpose fluids with enhanced low temperature performance	-32°C to +80°C ³

¹ Check with fluid supplier that fluid is compatible with nitrile compounds

² For operating temperatures above 80°C, please consult the factory

³ For operating temperatures below -20°C, please consult the factory

Port Sizes

Standard fluid ports are made from high-strength alloy steel, for maximum durability. BSPP ports are fitted as standard. ISO 6149 and SAE ports are available on request.

Model	BSPP	ISO 6149-1	SAE-Thread	SAE Flange (ISO 6162)
BAE01	G ³ / ₄	M27x2	n°12 1 ¹ / ₁₆ "-12	n/a
BAE02 - BAE06	G1 ¹ / ₄	M42x2	n°20 1 ⁵ / ₈ "-12	1" 6000 psi Code 62
BAE10 - BAE50	G2	M60x2	n°24 1 ⁷ / ₈ "-12	1 ¹ / ₂ " 6000 psi Code 62

Fluid Port Adapters

A range of adapters is available for use with Parker's bladder accumulators, to reduce the size of the fluid port. Adapters are supplied complete with a nitrile O-ring.

Model	Fluid Port Thread	Adapter Thread	Part No.
BAE01	G ³ / ₄	G ³ / ₈	BPA1
BAE02 - BAE06	G1 ¹ / ₄	G ³ / ₄	BPA2
BAE10 - BAE50	G2	G1	BPA3

Charging and Gauging Assembly

The charging and gauging assembly enables the user to charge Parker's bladder accumulators with nitrogen, and to test and alter the precharge pressure. It attaches to the accumulator's gas valve, and can be connected by hose to a standard commercial nitrogen bottle. Each kit contains:

- Test and filling apparatus incorporating gas valve key and bleed valve
- Filling hose, length 2.5m
- Protective case
- Gas valve adapters to fit all standard bladder accumulators
- 25 bar and 250 bar pressure gauges

Parker strongly recommends that the nitrogen bottle used should be fitted with a high pressure regulator.

Charging and Gauging Assembly with Adapter – All Models		
Territory	Gas bottle Fitting	Part No.
UK	5/8 BSP (male)	UCA 02
France	W 21.7 x 1/14" (female)	UCA 04
Germany	W 24.32 x 1/14" (female)	UCA 01
Italy	W 21.7 x 1/14" (male)	UCA 05
US	0.960 x 1/14" (male)	UCA 03

Accessories

Mounting Accessories

Parker clamp and base brackets provide a simple and secure method of mounting the accumulator. The clamps and brackets are galvanised to resist damage from corrosion. Rubber inserts absorb vibration and resist deformation in high temperature environments.

Clamp Bracket Assembly

Model	Nominal Volume (l)	Part No.	Quantity	See Figure	A	B	C	ØD	E	H	K	ØL	M

How to Order Bladder Accumulators

Key

Standard features

Optional features

Gas Precharge Pressure

BAE bladder accumulators can be delivered precharged with nitrogen. Where this option is chosen, the required precharge pressure should be shown in the last field of the model code, as above. Where this field is left blank, the accumulator will be supplied with a transport filling of approximately 2.5 bar.

Certification

BAE bladder accumulators are supplied with a Declaration of Conformity in accordance with European Pressure Equipment Directive 97/23/EC, and with an operating manual and a drawing showing the main dimensions and materials.
